

Information Warfare Center
Training and Consulting

INFORMATION SECURITY SOLUTIONS

Our mission: to provide premier technical solutions that empowers our clients with the latest in technical and security knowledge.

We specialize in computer security and have extensive knowledge of securing not only operating systems, but also applications and networks. Our experts have expertise in commercial, health care, financial, governmental and military applications and environments and we also offer support with Certification and Accreditation in the DoD, DOE, and other federal agencies using DIACAP, NIST, NIACAP and other C&A processes.

TECHNICAL TRAINING

We offer comprehensive training courses to build the knowledge required for certification. Our training is offered at our site, on your site, or online.

Certification not only meets mandated requirements but demonstrates commitment to the security profession. Receiving a professional certification shows peers, supervisors and, in turn, the general public a sincere commitment to a chosen career and the ability to perform to established standards.

Solutions that work for you

CONNECTING YOUR BUSINESS TO THE SECURITY RESOURCES YOU NEED

The combination of Real World experience, Research & Development, and out-of-the-box thinking place us above the rest.

What students are saying: "The instructor provided real world scenarios that added value to course material. His explanations were well thought and his knowledge of the subject matter is unquestioned. Ethical Hacking is a very complicated set of material that was expressed very well in this course. I look forward to using these skills on the job."

"Excellent Instructor. Nice to have someone who is in the field doing this everyday to teach the class. Great class. Had a lot of fun in it. I liked the hands on labs and knowledge transfer from instructor. I plan on taking Advanced Ethical Hacking, Reversing Malware, or Incident Response in the future."

"I enjoyed the way the instructor taught the class, he is a good instructor. He is able to communicate well with all different levels of technical abilities and personalities. I loved how there was lot of knowledge crammed into a short period of time."

"Extremely knowledgeable instructor. Very willing to share extra information from his personal knowledge base. Very good course materials overall. I greatly appreciate the amount of hands-on experience gained. I liked hearing about the instructor's personal knowledge. I also enjoyed having a large amount of hands on experience."

"This was a very informative and technically in-depth training course. All aspects of the advertised course were fully covered and ample opportunity was given for questions and interaction with the instructor."

"The instructor Jeremy was very clear on instructional techniques and was extremely knowledgeable. Jeremy is extremely patient and is a fine representative for the security profession. He related real experiences to the content that were very beneficial to understanding the concepts. All of the labs worked which is rare for some of the classes taught by other companies that i have attended. I enjoyed the exposure to many new techniques, tools and experiences."

"I have to take a minute to let you know about the EXCELLENT job Jeremy is doing in our CFE course. Not only does he brings his "real world" experience and examples into the mix but the guy KNOWS HIS STUFF! He supplements the material with relating videos that tie it all together.....the guy is NUCLEAR. I'm going to hate seeing Friday come because it will all be over and I'm gonna miss this guy. Jeremy represents InfoSec to the fullest and I'm glad that I've had to opportunity to watch this guy "shine" as he makes us all better at what we do. Trust me when I say, I speak for the entire class/crew"

DIGITAL FORENSICS

Computer forensics is becoming an increasingly important part of doing business. We offer expertise in incident response, e-discovery, digital forensic investigation, and litigation support. Our certified personnel have experience working with events ranging from corporate espionage to international cyber extortion.

ETHICAL HACKING

Red Team penetration testing capability is available with a wide range of focus. Our services range from PCI compliance testing to complete physical, cyber, and procedural security validation. The goal of this service is to emulate adversaries, test the current state of security in your organization, and report weaknesses along with providing solutions to mitigate those risks.

TOP LEVEL TRAINING

Our solutions range from set locations public courses to on-site and online solutions to deliver the best service in the industry. Call us today to find out about availability and pricing!

SECURITY SERVICE

We always keep security in mind throughout the entire system development life cycle (SDLC). We also provide solutions covering all steps from small business networks to international extranet WANs and support all of the common technologies. We also offer a list of specialized services to ensure you are empowered to stay secure.

COMPLETE DOD 8570.1M COMPLIANCE TRAINING FOR ALL LEVELS AND NEEDS!

Tier 3 Security course - First of a kind!

This course has recently been revamped. Originally, this class was more of an advanced CISSP book camp.

Since the remodel, this class prepares you for the CISSP and adds enough hands on experience to successfully pass the Certified Ethical Hacker (CEH) & Certified Hacking Forensics Investigator (CHFI). This is has grown from the eight day session to a full blown two week!

Special hands on modules cover hacking WiFi signals including 802.11 and bluetooth.

Some of the extras that are included are:

- Virus writing workshop
- Capture the flag
- Hacking with Linux.
